(7 pts)   c)   In Lab 7.3 we printed the rate step analysis in the form

                     RATE   NUMBER OF
                     STEP   CUSTOMERS

        Write the FORTRAN statements required to print the body of this report
        (you do not need to print the headings) as follows:

                Print Position   Description
                     1-2   Rate step number (integer)
                     6-9   Number of customers
                                                 (from the array NUM)

        Then terminate the program. This report should be single spaced.
