K201 First Exam REVIEW

1. (12 points) Describe any errors in the following FORTRAN statements. There may be no errors, one error, or several errors in each statement.

a) $A^{**2}/3.*B = R1$

b) PRINT, WT, ID, 3*X, NUM

c) IF(A.GE.30) GO TO END

d) $SUM = (2.A+3.B)^{**2}.1$

2. (12 points) Let $K=3$, $L=7$, $M=2$, $W=3$. and $T=5$.

Evaluate the following statements:

a) $I = K+2/L-1$ $I =$ _____

b) $X = L/K*M$ $X =$ _____

c) $Y = W^{**2}+T^{**2}/4.+T$ $Y =$ _____

d) $N1 = 3.*W/T+2.$ $N1 =$ _____

The output report lines should be printed (single spaced) as follows:

<u>Print Positions</u>	<u>Variable Name</u>	<u>Form</u>
3 - 7	ICN	Integer
10 - 29	Name	Alphanumeric
32 - 36	QTY	XXXX.
40 - 47	AMT	XXXXX.XX

The flow chart follows:

_____ 6. In order to execute FORTRAN programs a computer must have a FORTRAN

- a. CPU
- b. machine language
- c. compiler
- d. control unit
- e. none of the above

_____ 7. Integer mode is most appropriate for numbers used for

- a. measuring
- b. identification
- c. calculations
- d. division
- e. none of the above

_____ 8. INDIANA should be described as

- a. an invalid decimal variable
- b. an invalid integer variable
- c. a valid integer constant
- d. a valid integer variable
- e. none of the above

_____ 9. Any character other than a 0 or blank in column 6 of the FORTRAN coding form indicates that

- a. anything punched in columns 7 through 72 is a continuation of the preceding statement
- b. the statement number is too long
- c. anything written on this line will be printed in the FORTRAN program, but will not be translated
- d. columns 73-80 are used to continue this statement

_____ 10. A device that scans a typed or hand-printed form, recognizes the characters, and transmits the data to the CPU is called:

- a. magnetic tape unit
- b. optical character reader
- c. computer terminal
- d. line printer

_____ 11. In the following equation which operation is performed first?

$$(3 * J) ** 5 / K + 5$$

- a. adding 5
- b. multiplication of 3 times J
- c. exponentiation
- d. division by K
- e. none of the above

Name _____

K201-Quiz 40
11/4/81

(10 pts) 1. We have 400 cards punched with the following layout:

<u>card columns</u>	<u>Description</u>
1-7	Item Number (Integer)
8-12	Quantity on Hand (XXXXX [^])
13-17	Quantity on Order (XXXXX [^])

At the beginning of a program we wish to read the cards and establish three arrays: the array INØ of item numbers, the array QØH of quantity on hand, and the array QØØ of quantity on order. On the coding form below write the FORTRAN statements required for this portion of a program.

```
DIMENSION INØ(400), QØH(400), QØØ(400)
```

```
DØ 5 I=1,400
```

```
5 READ(5,2),INØ(I),QØH(I),QØØ(I)
```

```
2 FORMAT(I7,2F5.0)
```

Name _____

K201 Quiz 1B

1. (3 pts) ALU is a part of CPU and it stands for _____. Name 2 other functional parts of the CPU.

2. (2 pts) A compiler is a program that translates the _____ language program into a _____ language program.
3. (2 pts) When a program is compiled, each variable name is associated with a specific _____ in the computer memory.
4. (2 pts) FORTRAN is a _____ oriented language.
5. (2 pts) A memory register that can hold only one character is called _____. Otherwise is called a _____.
6. (1 pt) A memory register is identified by its
 - a. contents
 - b. name
 - c. address
 - d. identifier
 - e. none of the above
7. (1 pt) In FORTRAN a variable name cannot be more than _____ characters long.
8. (2 pts) A variable can be defined by an _____ statement or by an _____ statement.
9. (5 pts) Each of the following is considered to define a variable in FORTRAN. Indicate the mode if the variable is valid. If the variable is not valid explain why.
 - a. weight
 - b. W E I G H T
 - c. 6THCOL
 - d. INCOME
 - e. AVERAGE1

Name _____

K201 Quiz 1A

1. (3 pts) The components of CPU are

a. _____

b. _____

c. _____

_____ 2. (1 pt) The number that identifies a memory register is called

a. identifier

b. contents

c. address

d. name

e. none of the above

_____ 3. (2 pt) An IBM card has

a. 10 rows and 72 columns

b. 12 rows and 72 columns

c. 10 rows and 80 columns

d. 12 rows and 80 columns

e. none of the above

4. (2 pt) When a program is translated into machine language, each variable

name is associated with a specific _____ in the
computer memory.

5. (4 pts) Each of the following are considered to be a FORTRAN variable.
Indicate the mode if the variable is valid, if the variable is not
valid explain why.

a. idno

b. T 25 MN

c. GRSINCM

d. 6THNØ

6. (4 pts) Translate into FORTRAN notation each of the following expressions:

a) $4\sqrt{X} - \frac{5}{Y} + \frac{1}{2}Z$ _____

b) $(P-3C)^{3+M} - \frac{B^{2I}+D}{D^2-X}$ _____

7. (2 pts) In FORTRAN the result of a division with integers is always an
(which mode) _____ number obtained by _____.

K201 Quiz 1A

1. (3 pts) The components of CPU are

a. _____

b. _____

c. _____

_____ 2. (1 pt) The number that identifies a memory register is called

a. identifier

b. contents

c. address

d. name

e. none of the above

_____ 3. (2 pt) An IBM card has

a. 10 rows and 72 columns

b. 12 rows and 72 columns

c. 10 rows and 80 columns

d. 12 rows and 80 columns

e. none of the above

4. (2 pt) When a program is translated into machine language, each variable

name is associated with a specific _____ in the
computer memory.

5. (4 pts) Each of the following are considered to be a FORTRAN variable.
Indicate the mode if the variable is valid, if the variable is not
valid explain why.

a. idno

b. T 25 MN

c. GRSINCM

d. 6THNØ

6. (4 pts) Translate into FORTRAN notation each of the following expressions:

a) $4\sqrt{X} - \frac{5}{Y} + \frac{1}{2}Z$ _____

b) $(P-3C)^{3+M} - \frac{B^{2I}+D}{D^2-X}$ _____

7. (2 pts) In FORTRAN the result of a division with integers is always an
(which mode) _____ number obtained by _____.

K201-Quiz 3A

- (3 pts) 1. Let N be the two dimensional array $\begin{pmatrix} 7,6,3 \\ 2,8,5 \end{pmatrix}$. If $JCSØGS=N(1,1)+N(2,2)*N(2,1)$, what is the value of $JCSØGS$.
- a. 23
 - b. 53
 - c. 30
 - d. 11
 - e. none of the above
- (2 pts) 2. The operating system is told how to process a job by means of a _____ language.
- (4 pts) 3. Communication interface software is a part of support software. List two other groups of groups which we consider as a part of support software.

- (2 pts) 4. Programmers who produce and maintain the user programs are called the _____ programmers.
- (4 pts) 5. Finishcard is the last parameter card for a BMD1D program. Name two other parameter cards necessary to run this program.

Name _____

K201-Quiz 3B

- (2 pts) 1. The language we use to prepare our control cards is called a _____ language.
- (4 pts) 2. Translators are a part of support software. List two other groups of programs which we consider as a part of support software.

- (2 pts) 3. Programmers who produce and maintain the support software are called the _____ PROGRAMMERS.
- (4 pts) 4. There are five parameter cards necessary to run BMD5D program. Name two of them.

- (3 pts) 5. Let N be the two dimensional array $\begin{pmatrix} 7,6,3 \\ 2,8,5 \end{pmatrix}$. If $JCS\emptyset GS = N(1,1) + N(2,2) * N(2,1)$, what is the value of JCS \emptyset GS ?
- a. 23
 - b. 53
 - c. 30
 - d. 11
 - e. none of the above

Consider the following FORTRAN program:

```
      DIMENSION ALT(5), SNAKES(5)
      OPEN (UNIT=5, FILE='INPUT.DAT',STATUS='OLD')
      OPEN (UNIT=6, FILE='PRINT.DAT',STATUS='NEW')
      DO 10 K = 1,5
10    READ (5, 100) ALT(K), SNAKES(K)
100   FORMAT (F4.0, 1X, F2.0)
      20    READ (5, 200) HT
          IF (HT .LT. 0) STOP
          IF (HT .LT. 3000) GOTO 70
          DO 30 K = 1,5
          IF (HT .LE. ALT(K)) GOTO 50
30    CONTINUE
          WRITE (6, 200)
200   FORMAT ('0', 'NO SNAKES ABOVE 9000 FEET')
          GO TO 20
          50    WRITE (6, 300) SNAKES (K), HT
300   FORMAT ('0', F3.0,2X,'SNAKES/ACRE AT',2X,F5.0,2X,'FEET')
          GOTO 20
          70    WRITE (6, 400)
400   FORMAT ('0','MANY SNAKES/ACRE BELOW 3000 FEET')
          GOTO 20
      END
```

If this program were run, and the file INPUT.DAT contained the following records, specify exactly what would be written into the file named PRINT.DAT.

(Note: each line below represents one input record, starting in column 1, and the symbol b stands for a blank space.)

```
4000b98
6000b85
7000b42
8000b21
9000b07
3400
9800
1600
7200
b5400
-99
```

Write below exactly what PRINT.DAT would contain after this program runs.

- (3 pts) _____ 1. Run time error messages that partially explain why execution was terminated appear
- at the very end of the printout after the FORTRAN program.
 - after each line of the FORTRAN program **containing** an error
 - in the area where the control cards are listed before the printout of the FORTRAN program
 - one of the above depending from computer to computer
 - none of the above
- (3 pts) _____ 2. Which of the following is true:
- test data cards are used to detect syntax errors only
 - test data cards are used to detect logical errors only
 - test data cards are used to detect both syntax and logical errors
 - none of the above
- (3 pts) 3. The method of using parameters instead of constants in order to make a program more flexible is called program _____.
- (3 pts) _____ 4. The flowchart below corresponds to
- a condition controlled loop
 - a count-controlled loop
 - an uncontrolled loop
 - none of the above

- (4 pts) _____ 5. You are given the following set of statements:
- ```
M=8
DO 7 I=4,M
7 K=I+M
```
- How many times will statement #7 be executed?
- 5
  - 4
  - 1
  - none of the above

- (3 pts) \_\_\_\_\_ 1. Syntax errors in a FORTRAN program are detected
- at compilation time
  - by writing WRITE/FORMAT debugging statements
  - at the execution time
  - none of the above
- (3 pts) \_\_\_\_\_ 2. The test data cards are prepared by:
- the computer operator
  - user
  - programmer
  - none of the above
- (3 pts) \_\_\_\_\_ 3. The following part of a flowchart represents
- a condition-controlled loop
  - a count-controlled loop
  - an uncontrolled loop
  - none of the above

- (4 pts) \_\_\_\_\_ 4. You are given the following set of statements:
- ```
K=0
DO5 I=3,6
5 K=K+I
```

How many times will statement #5 be executed?

- 5
 - 4
 - 1
 - none of the above
- (2 pts) 5. Changing or modifying programs from time to time to keep them up to date is called _____.
- (3 pts) 6. The execution of a program is terminated and the capital letter I is printed instead of a numeric result if _____ was attempted.

K201 Exam
12/9/74

(30 pts.) 1. Identify any errors in the following FORTRAN statements

- a) $X2 = (RATE(3) - RATE(-3))/D$
- b) DO 40 I=0,17
- c) $X3 = S*T(2.) + 16.$
- d) DO 40 Y=1,24,3
- e) $X4 = A(N)/B(3*N-2)$
- f) $X5 = TIME(2*K/L)$

(20 pts.) 2. What would be the value of M after executing each of the following program segments?

a) M=0
DO 13 I=1,20
13 M=M+1
M= _____

b) M=0
DO 13 I=1,12,2
13 M=M+1
M= _____

c) DO 13 J=1,5
DO 13 I=1,7
13 M=M+1
M= _____

d) DO 15 I=1,6
DO 20 J=1,5
15 M=M+1
20 M=M-1
M= _____

3. Assume that we have an array W composed of 300 elements already stored in the computer memory (i.e., defined and already dimensioned) as a result of a previous portion of the program. Write a program segment (including any needed DIMENSION statements) for each of the following independent purposes:

(10 pts.) a) Add together the squares of all the elements of W and call the results WSQ.

1. Define or explain each of the following:

- a) a sequential access file
- b) interactive use of a computer
- c) multiprogramming
- d) a terminal
- e) an index to a file
- f) file organization
- g) an inverted file

2. In a program called XK201, show all the statements required to read a record from tape number 10 whose record layout is as follows:

<u>Position</u>	<u>Variable Name</u>	<u>Form</u>
1-9	NSS	integer
10-37	N1,N2,N3,N4,N5,N6,N7	alphabetic
38-39	NEXMPT	integer
40-45	SALARY	XXXX^XX
46-50	DEDS	XXX^XX
51-57	YTDPAY	XXXXX^XX

3. Suppose a bank has a file containing data on the status of each customer's checking account, organized by social security number. Each day they need to print out this record for a number of customers, given the required social security number.

- a) If this file is on magnetic tape, devise a procedure that will result in printing the desired checking account records.
- b) Prepare an overall flow chart for the computer program that causes these records to be printed.
- c) Suppose this customer checking account file is a direct access file rather than a tape file. Modify the procedure in part a) to use the direct access file to print these records.
- d) Prepare an overall flow chart for the computer program that causes these records to be printed from the direct access file.

(15 pts) 6. Consider the following sales cards:

<u>Card Columns</u>	<u>Description</u>
1-6	Data (month-day-year)
7-11	Customer number (1800 active customers)
12-13	Number of the office that made the sale (there are 42 offices)
14-16	Number identifying the salesman who made the sale (there are 137 salesmen)
17-21	Item number (5000 items)
42-45	Quantity sold
46-51	Dollar amount of sale (XXXX XX)

We wish to produce the following reports summarizing dollar sales from these cards.

Sales by Salesman

Sales by Customer

Prepare a system flow chart to produce these reports using sorting to organize the data. Be sure to use standard symbols and conventions in the flow charts in this question. You may assume that the sales cards have been punched and are available in off-line storage.

- (15 pts) 6. We are interested in analyzing voter turn-out in the election in Indiana. In particular, we would like to produce the following two reports:

VOTING BY COUNTRY

VOTING BY AGE

A card has been prepared for each individual who voted in the primary election. Each card contains the following information:

Card Columns

1-30	Name of voter
31	Party code (1=democrat, 2=republican)
32-33	Age of voter (ranges from 18 to 99)
34-35	County number (ranges from 1 to 92)

Prepare a system flow chart using standard symbols and conventions for preparing the above reports using sorting to organize the data. You may assume that the cards have been punched and are available in offline storage.

2. You are given a set of documents rather than cards. On each document the same data are recorded as in question 1.

Design a system flow chart to make a new file on magnetic tape from these data. The control key for a new file is IDS.

2. You are given a set of documents rather than cards. On each document the same data are recorded as in question 1.

Prepare a system flowchart to update the file on magnetic tape with these data.

Assignment Schedule

Date	Text	Other
May 15	Introduction Chapter 1	Ex. 5, Section 1.3
May 22	Chapter 2 Chapter 3	Lab 1 assigned Ex. 5 due
May 29	Chapter 4 Chapter 5	Lab II assigned Lab I due
June 5	Chapter 6 Test	Lab III assigned Lab II due
June 12	Chapter 7 Chapter 8 Chapter 9	Lab IV assigned Lab III due
June 19	Chapter 10 FINAL EXAM	Lab IV due

(10 pts) 2. As a later portion of the program in problem 1, we wish to create an array THW of the total hours worked by each employee, each element of which is the regular hours worked (from array RH) plus the overtime hours worked (from array OTH). Write the FORTRAN statements required to create the array THW, and also to count the number of employees who worked overtime (overtime hours greater than zero) and call this count C.

```
( DIMENSION AMT(200) ) optional  
TAMT=0  
DO 15 I=1,200  
  AMT(I)=P(I)*Q(I)  
15 TAMT=TAMT+AMT(I)
```

- (10 pts) 2. As a later portion of the program in problem 1, we wish to create an array Q of the total of the quantity on hand (from array QOH) and the quantity on order (from array QOO). On the coding form below write the FORTRAN statements required to create the array Q, and also to count the number of items that have nothing on order (QOO equal to zero) and call this count K.

```
DIMENSION TTS(75)
```

```
NAS=0
```

```
DO 15 I=1,75
```

```
TTS(I)=T1(I)+T2(I)
```

```
IF(TTS(I).GT.180.)NAS=NAS+1
```

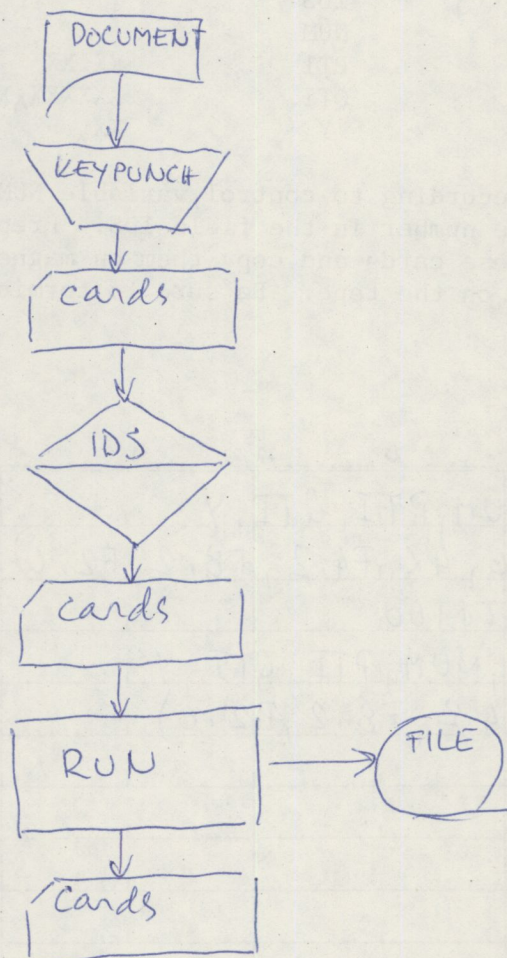

```
15 CONTINUE
```

(10 pts) 2. As a later portion of the program in problem 1, we wish to create an array THW of the total hours worked by each employee, each element of which is the regular hours worked (from array RH) plus the overtime hours worked (from array OTH). Write the FORTRAN statements required to create the array THW, and also to count the number of employees who worked overtime (overtime hours greater than zero) and call this count C.

```
DIMENSION TWT(330)
C=0.
DO 15 I=1,330
TWT(I)=Q(I)+UWT(I)
IF(UWT(I).GT.50.)C=C+1.
15 CONTINUE
```

2. You are given a set of documents rather than cards. On each document the same data are recorded as in question 1.

Design a system flow chart to make a new file on magnetic tape from these data. The control key for a new file is IDS.

- (11 pts) 2. In a program called UPDATE a report is printed using table look-up on equal and an old file (on tape 23) is updated (on tape 20). Transaction cards are sorted in the same order as the records on the tape. Table values are punched in the table cards.

Design a system flowchart for this problem!

2. You are given a set of documents rather than cards. On each document the same data are recorded as in question 1.

Design a system flow chart to make a new file on magnetic tape from these data. The control key for a new file is IDS.

8. (2 pts) Let $X = 13.95$ and $I = 7$
- Let $JJ = X$ Then $JJ =$ _____
 - Let $WEEK = I$. Then $WEEK =$ _____
9. (2 pts) Indicate the errors, if any, in the following FORTRAN expressions.
- $(A-(B+(C-D*(3*E-C)))-5.D)$
 - $(I-27)**2-(K/L+1)**3(N-1)$
10. (4 pts) Perform the following calculations using FORTRAN rules of arithmetic
- $(4-5/3)*5/2 =$ _____
 - Let $A = 2.5$ $B = 1.5$, $C = 3$.
 $C*(A+2.*B)/(A-B) =$ _____
 - Let $X = 5$. $L = 2$
 $X**2/2.+2.5. =$ _____
 - Let $I = 3$, $J = 4$
 $J/I*2 =$ _____
11. (2 pts) A variable can be defined by a(n) _____ statement or by an _____ statement.
12. (2 pts) A memory register that can hold only one character is called _____ . Otherwise is called _____ .

8. (2 pts) Let $X = 13.95$ and $I = 7$
- Let $JJ = X$ Then $JJ =$ _____
 - Let $WEEK = I$. Then $WEEK =$ _____
9. (2 pts) Indicate the errors, if any, in the following FORTRAN expressions.

- _____ 12. The key to harnessing the computer's ability to perform repetitive tasks at fantastic speed is
- a. the procedure-oriented language
 - b. the compiler
 - c. the stored program
 - d. the high-speed printer
 - e. none of the above

- _____ 13. Which of the following FORTRAN statements is not allowed?
- a. $Z = I/J$
 - b. $AVGE = TOT/3$
 - c. $W = P**2$
 - d. $I = P+Q + R$

Completion Questions (6 questions, 3 points each)

14. Draw the flowchart symbol that represents the beginning or termination of a program.
15. A memory register that can hold one character of data is called a(n) _____.
16. An arithmetic statement in FORTRAN has the form _____ = _____.
17. A FORTRAN statement that is translated into one or more machine language instruction is called a(n) _____ statement.
18. Statement numbers must be written in columns _____ of the FORTRAN coding form.
19. Indicate how you would punch the number 174.31 in a ten-position decimal field with specification F10.4, assuming that the decimal point is not to be punched. Use the symbol Δ to indicate a blank.
- _____
20. After the following sequence of FORTRAN statements, what is the value of D?
- A = 5.
 - B = 4.
 - C = -2.
 - D = (A*B+C)/B

ANSWER _____

Multiple Choice Questions (13 questions, 3 points each)

_____ 1. Which of the following numbers is invalid in FORTRAN?

- a. 0
- b. +0.02
- c. 7,634.63
- d. -.0632

_____ 2. In the following expression, what is the mode of the answer when it is placed in the memory register? $J = C/D**I$

- a. integer
- b. decimal
- c. invalid, mixed mode
- d. integer and decimal
- e. none of the above

_____ 3. In the translation process each FORTRAN variable name is assigned to a(n)

- a. job control command
- b. data field
- c. operation code
- d. specific memory register
- e. none of the above

_____ 4. The last statement of a FORTRAN program must be

- a. a FINISH statement
- b. a PROGRAM statement
- c. an END statement
- d. a STOP statement

_____ 5. Let $I = 2$, $M = 3$ and $K = -4$ then $K/M*I$ would be evaluated as:

- a. 3
- b. 2
- c. 1
- d. 0

4. (9 points) Write an equivalent FORTRAN expression for each of the following algebraic expressions:

a) $\sqrt{2x^2 + 3}$

b) $\frac{3X + 4Y}{2A}$

c) $(A + 3B)^{1/3}$

5. (25 points) Write a complete FORTRAN program for the following flow chart.

The input cards have the following layout:

<u>Card</u> <u>Columns</u>	<u>Description</u>	<u>Variable Name</u>
1 - 5	Customer Number	ICN
6 - 25	Name	(Assign your own)
31 - 34	Quantity ordered	QTY

The output report headings at the top of the page should be:

<u>Print</u> <u>Positions</u>	<u>Heading</u>
1 - 8	CUSTOMER
16 - 19	NAME
30 - 37	QUANTITY
41 - 46	AMOUNT

K201 - Quiz 1A
9/10/81

Each of the following questions counts 2 points.

1. Memory is a part of CPU. Name two other functional units which belong to CPU. _____
2. The physical components that make up the computer are referred to as _____.
3. Programs written in any programming language are called _____ programs. Compiler translates such programs into a _____ language program.
4. A FORTRAN statement that is not translated into any instruction is called a _____ statement.
5. What is the maximum number of characters that can be recorded on a single punched card? _____
6. When an alphabetic data item doesn't fill the entire card data field, we usually align the data to the (which side) _____ and leave any blanks on the _____.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers.
 - a) 3250000.
 - b) 0.0
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid.
 - a) CLASS#
 - b) ACCOUNT
9. Perform the following calculations, using the FORTRAN rules of arithmetic.
 - a) $(2-7/3)*2 =$
 - b) Let $A=2.5$, $B=1.$, $C=3.5$
 $C*(A+3.*B)-B*C =$
10. Indicate the errors, if any, in the following FORTRAN expressions.
 - a) $(ALPHA-(BETA*R**2.))/-GAMMA)/3*OMEGA$
 - b) $(I+3)(I-5)/KAPPA-(1+KAPA**2.5)$

K201 - Quiz 1B
9/9/81

Each of the following questions counts 2 points.

1. Control unit is a part of CPU. Name two other functional units which belong to CPU: _____
2. The programs that tell the computer what to do are referred to as _____.
3. Compiler translates the procedure-oriented language into _____ language. When program is translated, it is called an _____ program.
4. A FORTRAN statement that is translated into one (or more) instruction(s) is called _____ statement.
5. According to the IBM card coding scheme, each letter is represented by (how many) _____ punches and a numeric digit by (how many) _____ punches in a card column.
6. When a numeric data item doesn't fill the entire card data field, we leave any blanks on the (which side) _____ and align the number to the _____.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers:
 - a) -3.1459
 - b) 0.0
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid!
 - a) CASH\$
 - b) PAY-OFF
9. Perform the following calculations, using the FORTRAN rules of arithmetic.
 - a) $(7-5/4)/3 =$
 - b) Let $A=3.5$, $B=0.5$, $C=6$.
 $C*(A+5.*B)/(A-B)$
10. Indicate the errors, if any, in the following FORTRAN expressions:
 - a) $(A-(B*C**2)/2.6)***3$
 - b) $I+5*(K\emptyset NT\emptyset -7K)**(0.5)$

K201 - Quiz 1D
9/10/81

Each of the following questions counts 2 points.

1. ALU is a part of CPU. Name two other functional units which belong to CPU:

2. A memory register that will store only one character is called a _____.
3. Each machine language instruction is composed of two parts. They are:

4. When a program is translated into a machine language, each variable name is associated with a specific _____ in the computer memory.
5. What is the maximum number of characters that can be recorded on a single card? _____
6. The arrangement of the card data fields in a particular application is called the _____.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers:
 - a) 1000000.00+
 - b) 0,000271
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid.
 - a) SUMARUM
 - b) G000!
9. Perform the following calculations using the FORTRAN rules of arithmetic.
 - a) $(2-7/3)/5 =$
 - b) Let $A=2.5$, $B=1.5$, $C=3$.
 $C*(A+2.*B)/(A-B) =$
10. Indicate the errors, if any, in the following FORTRAN expressions.
 - a) $(A-(B+(C-D*(3*E-C)))-5.D)$
 - b) $(I-27)**2-(K/L+1)**3(N-1)$

K201 - Quiz 1C
9/9/81

Each of the following questions counts 2 points.

1. ALU is a part of CPU. Name two other functional units which belong to CPU:

2. In a memory, each register is identified by a number, called its _____.
3. Instruction which cause the computer to execute an instruction other than next in a sequence is called a _____ instruction.
4. Before it is executed the object program must be _____ into the computer memory.
5. The convention that associates a unique combination of punches with each character is called the punch card _____.
6. There are (how many) _____ rows and (how many) _____ columns in a punched card.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers:
 - a) -135
 - b) 2,337.05
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid:
 - a) K201
 - b) BUDGAT
9. Perform the following calculations using the FORTRAN rules of arithmetic:
 - a) $(8-1/2)/3 =$
 - b) Let $A=2.5$, $B=0.5$, $C=5$.
 $C*(A-2.*B)/(A-B)$
10. Indicate the errors, if any, in the following FORTRAN expressions:
 - a) $(7*MEMO/(HOUR-2))**2$
 - b) $(A-(B*C**2)/-3.3)**3$

K201-Quiz 2A

(2 pts) 1. Indicate and explain errors (if any) in the following FORTRAN arithmetic statement:

B&Co = (2.PI-X1**²*(I+1)) /L23)

↑ ↑ ↑ ↙ ↘

1. 2. 3. 4.

1. special character in the variable.
2. missing operator
3. operators not separated
4. unequal number of parentheses

(4 pts) 2. Translate the following mathematical expression into an equivalent FORTRAN expression:

$$\frac{(1 - \frac{x^2}{y}) \cdot (2 - \sqrt{xy})}{2x^2 - 5y} + 1$$

$(1 - X**2/Y) * (2 - (X*Y)**.5) / (2.*X**2 - 5.*Y) + 1.$

(6 pts) 3. Evaluate the following sequence of FORTRAN statements, given R1=3.:

R2 = (3.5 - R1 / 2.) ** 2 - 1. = (3.5 - 1.5) ² - 1. = (2.) ² - 1. = 4. - 1. = 3.

R3 = (R2 ** 2 - 2.* R1) / 3. + 1. = (3. ² - 2*3.) / 3. + 1. = (9. - 6.) / 3. + 1. = 3. / 3. + 1. = 1. + 1. = 2.

K2R = (R1 / R2 + 1.) / (R3 - 1.) + 1.5 * R2 = (3. / 3. + 1.) / (2. - 1.) + 1.5 * 3. = (1. + 1.) / 1. + 4.5 = 2. + 4.5 = 6

(8 pts) 4. Consider the following card layout:

Card Columns	Description	Form	Variable name
10-14	Item #	Integer	INØ
15-33	Item name	Alphanumeric	N1, N2, N3, N4, N5
39-41	No. of items sold	Integer	NØIS
55-59	Unit price	XXX,XX	UP

- a) define variable names
- b) write FORTRAN statements necessary to read a card with given layout.

1	5	6	7	10	15	20	25	30	35	40	45	50	55	60
				READ	(5, 3)	INØ	N1	N2	N3	N4	N5	NØIS	UP	
	3			FORMAT	(9X,	I5,	4A4,	A3,	5X,	I3,	13X,	F5.2)		

K201-Quiz 2A
9/23/81

(2 pts) 1. Indicate and explain errors (if any) in the following FORTRAN arithmetic statement:

```

RAD, QN = (PET - PAUL) ** 2 / ((RAD * QN - 1.) * 5) - INPUT
    
```

Annotations: "NOT ALLOWED" points to the comma in the assignment; "WRONG MODE" points to the exponentiation operator (**); "OR TOO MUCH" points to the subtraction operator (-).

(4 pts) 2. Translate the following mathematical expression into an equivalent FORTRAN expression:

$$\frac{(27KA - U)^2 + 5.5B}{A + \theta} - R^{2K}$$

Annotations: "WRONG MODE" and "ADD. PARENTHESES NEEDED" point to the mathematical expression. The handwritten FORTRAN translation is: $((27.*AKAPU - U) ** 2 + 5.5 * B) / (A + THETA) - R ** (2 * K)$

(6 pts) 3. Evaluate the following sequence of FORTRAN statements, given A=3.:

$B = (A - 1.) ** 2 - 2. \quad (3. - 1.)^2 - 2. = 2.$
 $C = ((A + B) * (A - B)) / 2. \quad (3. + 2.) * (3. - 2.) / 2. = 25.$
 $KQRS = (A + 2. * C) / (C - 2. * B) / 2. \quad (3. + 5.) / (25 - 4.) / 2. = -2$

(8 pts) 4. Consider the following card layout:

Card columns	Description	Form	Variable name
4-11	Item#	Integer	_____
31-40	Department	Alphanumeric	_____
41-45	Quantity	Integer	_____
48-53	Price	XXXX,XX	_____

(Decimal point not punched in the "Price" data field)

Mode!
3 variables!
Mode!
Mode!

Define variable names and write FORTRAN statements necessary to read this card and enter above data into memory registers associated with variable names.

```

READ(5,4) I, A1, A2, A3, I, D
4 FORMAT(3X, I8, 19X, 2A4, A2, I5, 2X, F6.2)
    
```

K201-Quiz 2B
9/23/81

(2 pts) 1. Indicate and explain errors (if any) in the following FORTRAN arithmetic statement:

A112=(2-3K/MØTØ)**PI/A+123)-K**2

Annotations:
 - * above 3: NOT ALLOWED
 - Ø: WRONG MODE
 - Ø: TOO MANY PAR.
 - Ø: CHANGE MODE
 - Ø: ADD PARENTH.

(4 pts) 2. Translate the following mathematical expression into an equivalent FORTRAN expression:

$$\frac{(2A+1)(2B-1)-J1}{A+B^2} + (A-1)^2$$

Annotations:
 - * above 2A: CHANGE MODE
 - * above 2B: ADD PARENTH.
 - * above 1: CHANGE MODE
 - * above 1: ADD PARENTH.

$$((2.*A+1.)*(2.*B-1.)-AJ1)/(A+B**2) + (A-1.)**2$$

(6 pts) 3. Evaluate the following sequence of FORTRAN statements, given A=4.:

B=(A-2.)*2-2. $(4.-2.)^2 - 2. = 2.$
 C=((A+B)*(A-B))/2. $(4.+2.)(4.-2)/2. = 6.$
 KØRS=(A+2.*C)/(C-2.*B)/2. $(4.+12.)/(6.-4)/2. = 4$

(8 pts) 4. Consider the following card layout:

card columns	Description	Form	Variable name
3-8	Sequence#	Integer	_____
11-25	Name	Alphanumeric	_____
26-27	Credit hours	Integer	_____
39-42	Points	XXX^X	_____

Mode!
4 variables!
Mode!
Mode!

(Decimal point not punched in the data field "Points")

Define variable names and write FORTRAN statements necessary to read this card and enter above data into memory registers associated with variable names.

```

READ(5,4),I,A1,A2,A3,A4,I,D
4 FORMAT(2X,I6,3A4,A3,
4 FORMAT(2X,I6,2X,3A4,A3,I2,11X,F4.1)
    
```

K201-Quiz (2C)
9/24/81

(2 pts) 1. Indicate and explain errors (if any) in the following FORTRAN arithmetic statement:

RAD ØN = (PET-PAUL)*3/(RAD-ØN+1)**5-INPUT

Annotations:
 - Red arrow pointing to the first opening parenthesis: **MODE**
 - Red arrow pointing to the closing parenthesis: **TOO MANY LEFT PARENTH.**

(4 pts) 2. Translate the following mathematical expression into an equivalent FORTRAN expression:

Annotations:
 - Red arrow pointing to the exponent: **CHANGE MODE ***
 - Red arrow pointing to the denominator: **ADD. PARENTH.**
 - Red arrow pointing to the term (2+K): **PUT IN PARENTH.**

$$((KAPAI - U) * 2 + 5 * B) / (A - THETA) - R * (2 + K)$$

(6 pts) 3. Evaluate the following sequence of FORTRAN statements, given A=2.:

B=(A-1.)**2-2. $(2.-1.)^2 - 2. = -1.$
 C=((A+B)*(A-B))/2. $(2.-1.)(2.+1.)/2. = 1.5$
 KØRS=(A+2.*C)/(C-2.*B)/2. $(2.+3.)/(1.5+2.)/2. = 0$

(8 pts) 4. Consider the following card layout:

Card columns	Description	Form	Variable Names
2-10	Item#	Integer	_____
11-21	Department	Alphanumeric	_____
31-35	Quantity	Integer	_____
38-43	Price	XXXX ^ XX	_____

mode!
3 variables
mode!
mode!

(Decimal point not punched in the "Price" data field)

Define variable names and write FORTRAN statements necessary to read this card and enter above data into memory registers associated with variable names.

READ(5,4) I, A1, A2, A3, I, D
 n FORMAT(IX, I9, 2A4, A3, 9X, 5I, 2X, F6.2)

K201-Quiz (2D)
9/24/81

(2 pts) 1. Indicate and explain errors (if any) in the following FORTRAN arithmetic statement:

$$A\&123=(2-5L/AUT\emptyset)**(K+1)/M\emptyset T\emptyset*(\ast 2-K)$$

NOT ALLOWED (points to A&123)
 WRONG MODE (points to /M\emptyset T\emptyset)
 NOT NEEDED (points to \ast 2-K)
 * (points to the asterisk in the denominator)

(4 pts) 2. Translate the following mathematical expression into an equivalent FORTRAN expression:

$$\frac{(2A-1)(2B+1)-AJ}{A^2-B} + (A+3B)^2$$

ADDITIONAL PARENTH (points to the denominator)
 CHANGE MODE (points to the exponent 2)

$$((2.*A-1.)*(2.*B+1.)-AJ)/(A**2-B)+(A+3.*B)**2$$

(6 pts) 3. Evaluate the following sequence of FORTRAN statements, given A=3.:

$$B=(A-1)**2-2. \quad (3.-1.)^2-2.=4.-2.=2.$$

$$C=((A+B)*(A-B))/2. \quad (3.+2.)(3.-2.)/2.=5.*1./2.=2.5$$

$$K\emptyset RS=(A+2.*C)/(C-2.*B)/2. \quad (3.+5.)/(2.5-4.)/2.=(8.)/(-1.5)/2.=-2$$

(8 pts) 4. Consider the following card layout:

card columns	Description	Form	Variable name
2-6	Sequence#	Integer	_____
11-23	Name	Alphanumeric	_____
24-25	Credit hours	Integer	_____
38-41	Points	XXX^X	_____

mode!
4 variables!
mode!
mode!

(Decimal point not punched in the data field "Points")

Define variable names and write FORTRAN statements necessary to read this card and enter above data into memory registers associated with variable names.

4	READ(5,u)I,A1,A2,A3,A4,I,D			
	FORMAT(1X,I5,4X,3A4,A1,I2,12X,F4.1)			

K201 - Quiz 1D
9/10/81

Each of the following questions counts 2 points.

1. ALU is a part of CPU. Name two other functional units which belong to CPU:
MEMORY, CONTROL UNIT
2. A memory register that will store only one character is called a BYTE.
3. Each machine language instruction is composed of two parts. They are:
OPERATION CODE, ADDRESS
4. When a program is translated into a machine language, each variable name is associated with a specific REGISTER in the computer memory.
(or ADDRESS)
5. What is the maximum number of characters that can be recorded on a single card? 80
6. The arrangement of the card data fields in a particular application is called the CARD LAYOUT.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers:
 - a) 1000000.00 SIGN ON THE RIGHT NOT ALLOWED
 - b) 0,000271 DECIMAL COMMAS NOT ALLOWED
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid.
 - a) SUMARUM TOO MANY CHARACTERS
 - b) G0000 SPECIAL CHARACTER NOT ALLOWED
9. Perform the following calculations using the FORTRAN rules of arithmetic.
 - a) $(2-7/3)/5 = 0$
 - b) Let $A=2.5$, $B=1.5$, $C=3$.
 $C*(A+2.*B)/(A-B) = 16.5$
10. Indicate the errors, if any, in the following FORTRAN expressions.
 - a) $(A-(B+(C-D*(3*E-C)))-5.D)$
 \downarrow OPERATION (*) NOT SPECIFIED
 \downarrow D.P. MISSING
 - b) $(I-27)**2-(K/L+1)**3(N-1)$
 \uparrow OPERATION (*) NOT SPECIFIED

K201 - Quiz 1C
9/9/81

Each of the following questions counts 2 points.

1. ALU is a part of CPU. Name two other functional units which belong to CPU:
MEMORY, CONTROL UNIT
2. In a memory, each register is identified by a number, called its ADDRESS.
3. Instruction which cause the computer to execute an instruction other than next in a sequence is called a BRANCHING instruction.
4. Before it is executed the object program must be LOADED into the computer memory.
5. The convention that associates a unique combination of punches with each character is called the punch card CODING SCHEME.
6. There are (how many) 12 rows and (how many) 80 columns in a punched card.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers:
 - a) -135 INTEGER
 - b) 0 2337.05
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid:
 - a) K201 INTEGER
 - b) BUDGAT DECIMAL
9. Perform the following calculations using the FORTRAN rules of arithmetic:
 - a) $(8-1/2)/3 = 2$
 - b) Let A=2.5, B=0.5, C=5.
 $C*(A-2.*B)/(A-B) = 3.75$
10. Indicate the errors, if any, in the following FORTRAN expressions:
 - a) $(7*MEMO/(HOUR-2))**2$ MIXED MODE
 - b) $(A-(B*C**2)/-3.3)**3$ TWO SUBSEQUENT OPERATIONS

K201 - Quiz 1B
9/9/81

Each of the following questions counts 2 points.

1. Control unit is a part of CPU. Name two other functional units which belong to CPU: ARITHMETIC-LOGICAL UNIT (or ALU), MEMORY
2. The programs that tell the computer what to do are referred to as SOFTWARE.
3. Compiler translates the procedure-oriented language into MACHINE language. When program is translated, it is called an OBJECT program.
4. A FORTRAN statement that is translated into one (or more) instruction(s) is called EXECUTABLE statement.
5. According to the IBM card coding scheme, each letter is represented by (how many) 2 punches and a numeric digit by (how many) 1 punches in a card column.
6. When a numeric data item doesn't fill the entire card data field, we leave any blanks on the (which side) LEFT and align the number to the RIGHT.
7. Identify the mode (or explain what is wrong if incorrect) of each of the following numbers:
 - a) -3.1459 DECIMAL
 - b) 0.0 DECIMAL
8. Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid!
 - a) CASH\$ (Circled)
 - b) PAY-OFF (Circled)
9. Perform the following calculations, using the FORTRAN rules of arithmetic.
 - a) $(7-5/4)/3 =$ 2
 - b) Let A=3.5, B=0.5, C=6.
 $C*(A+5.*B)/(A-B)$ 12
10. Indicate the errors, if any, in the following FORTRAN expressions:
 - a) $(A-(B*C**2))/2.6)$ ***3
 - b) $I+5*(K\emptyset NT\emptyset -7K)**(0.5)$

\uparrow
 \uparrow
 \uparrow

K201 Quiz 5 B

- (2 pts) 1. There are two categories of software. One is called the support software and the other is APPLICATION software.
- (2 pts) 2. The operating system is told how to process a job by means of a JOB CONTROL language.
- (4 pts) 3. Translators are a part (or element) of support software. Name two other elements of support software:
any; OPERATING SYSTEM, COMMUNICATION INTERFACE, DATA(BASE) MNGM. SERVICE PROGR.
- (4 pts) 4. FINISH card is the last parameter card for a BMDID program. Name two other parameter cards necessary to run this program:
PROBLM, VARIABLE FORMAT
- (2 pts) 5. An example of CANNED programs is BMD.
- (4 pts) 6. In summarization process, data cards must be SORTED according to CONTROL VARIABLE.
- (2 pts) 7. If we want to punch a summary card in summarization program, we must include a WRITE statement between _____.

K201 - Quiz 1A
9/10/81

Each of the following questions counts 2 points.

- Memory is a part of CPU. Name two other functional units which belong to CPU. ARITHMETIC-LOGICAL UNIT (or ALU), CONTROL UNIT
- The physical components that make up the computer are referred to as HARDWARE.
- Programs written in any programming language are called SOURCE programs. Compiler translates such programs into a MACHINE language program.
- A FORTRAN statement that is not translated into any instruction is called a NON EXECUTABLE statement.
- What is the maximum number of characters that can be recorded on a single punched card? 80
- When an alphabetic data item doesn't fill the entire card data field, we usually align the data to the (which side) LEFT and leave any blanks on the RIGHT.
- Identify the mode (or explain what is wrong if incorrect) of each of the following numbers.
 3250000. DECIMAL
 - 0.0 DECIMAL
- Each of the following are considered to be a FORTRAN variable. If any of them is valid, indicate the mode, otherwise explain why it is not valid.
 - CLASS# NO SPECIAL CHARACTERS ALLOWED
 - ACCOUNT TOO MANY CHARACTERS
- Perform the following calculations, using the FORTRAN rules of arithmetic.
 - $(2-7/3)*2 = 0$
 - Let $A=2.5, B=1., C=3.5$
 $C*(A+3.*B)-B*C = 15.75$
- Indicate the errors, if any, in the following FORTRAN expressions.
 - $(\text{ALPHA}-(\text{BETA}*\text{R}^{**2.})/-\text{GAMMA})/3*\text{OMEGA}$
 ↓ TWO SUBSEQUENT OPERATIONS
 MISSING D.P.
 - $(I+3)(I-5)/\text{KAPPA}-(1+\text{KAPA}^{**2.5})$
 ↑ MISSING OPERATION (*) → DECIMAL EXPONENT NOT ALLOWED

K201 Quiz 5A

- (2 pts) 1. The language we use to prepare control cards is called a JOB CONTROL language.
- (4 pts) 2. There are three major sources of software, one of them being the computer manufacturer. Name the other two sources:
SOFTWARE COMP. USERS.
- (2 pts) 3. Programmers who produce and maintain the user programs are called the APPLICATION programmers.
- (2 pts) 4. BMD is an example of the CANNED program.
- (4 pts) 5. We need five parameter cards to run BMD5D program. Name two of them:
any of: PROBLM, SELECT, VARIABLE FORMAT, HEADING, FINISH
- (4 pts) 6. What is information?
DATA TRANSFORMED INTO A FORM WHERE IT IS USEFUL
-
- (2 pts) 7. If we want to print a line for each input card in summarization program, we must include a WRITE statement before BLOCK 80 (after bl. 60).

K201 Quiz 5A

- (2 pts) 1. The language we use to prepare control cards is called a JOB CONTROL language.
- (4 pts) 2. There are three major sources of software, one of them being the computer manufacturer. Name the other two sources: SOFTWARE COMP. USERS.
- (2 pts) 3. Programmers who produce and maintain the user programs are called the APPLICATION programmers.
- (2 pts) 4. BMD is an example of the CANNED program.
- (4 pts) 5. We need five parameter cards to run BMD5D program. Name two of them:
any of: PROBLM, SELECT, VARIABLE FORMAT, HEADING, FINISH
- (4 pts) 6. What is information?
DATA TRANSFORMED INTO A FORM WHERE IT IS USEFUL
- (2 pts) 7. If we want to print a line for each input card in summarization program, we must include a WRITE statement before BLOCK 80 (after bl. 60)

K201-Quiz 2A

(2 pts) 1. Indicate and explain errors (if any) in the following FORTRAN arithmetic statement:

```
B&Co = (2.PI-X1**-2*(I+1)) /L23
```

↑ ↑ ↑ ↖ ↗
1. 2. 3. 4.

1. special character in the variable
2. missing operator
3. operators not separated
4. unequal number of parentheses

(4 pts) 2. Translate the following mathematical expression into an equivalent FORTRAN expression:

$$\frac{(1-\frac{x^2}{y})(2-\sqrt{xy})}{2x^2-5y} + 1$$

$$(1-x**2/y)*(2-(x*y)**.5)/(2.*x**2-5.*y)+1.$$

(6 pts) 3. Evaluate the following sequence of FORTRAN statements, given R1=3.:

$$R2 = (3.5 - R1 / 2.) ** 2 - 1. = (3.5 - 1.5)^2 - 1. = (2.)^2 - 1. = 4. - 1. = 3.$$

$$R3 = (R2 ** 2 - 2. * R1) / 3. + 1. = (3.^2 - 2 * 3.) / 3. + 1. = (9. - 6.) / 3. + 1. = 3. / 3. + 1. = 1. + 1. = 2.$$

$$K2R = (R1 / R2 + 1.) / (R3 - 1.) + 1.5 * R2 = (3. / 3. + 1.) / (2. - 1.) + 1.5 * 3. = (1. + 1.) / 1. + 4.5 = 2. + 4.5 = 6$$

(8 pts) 4. Consider the following card layout:

Card Columns	Description	Form	Variable name
10-14	Item #	Integer	INO
15-33	Item name	Alphanumeric	N1, N2, N3, N4, N5
39-41	No. of items sold	Integer	NOIS
55-59	Unit price	XXX,XX	UP

- a) define variable names
- b) write FORTRAN statements necessary to read a card with given layout.

↓ ↓

1	5	6	7	10	15	20	25	30	35	40	45	50	55	60
				READ	(5, 3),	INO	N1,	N2,	N3,	N4,	N5,	NOIS,	UP	
3				FORMAT	(4X,	I5,	4A4,	A3,	5X,	I3,	13X,	F5.2)		

K201 - Quiz 1B
1/21/82

Each of the following questions counts 2 points.

- What is the maximum number of characters that can be recorded on a single punched card? 80
- According to card coding scheme, each letter of the alphabet is represented by (how many) 2 holes in a column.
- Control unit is a part of CPU. Name two other functional units which belong to CPU: ALU MEMORY
- The physical components that make up the computer are referred to as HARDWARE.
- A FORTRAN statement that is not translated into any instruction is called a NONEXECUTABLE statement.
- When an alphabetic data item doesn't fill the entire card data field, we usually align the data to the (which) LEFT side and leave any blanks on the RIGHT.
- Identify the mode (or explain what is wrong if incorrect) of each of the following constants:
 - 2,166.44 COMMA NOT ALLOWED
 - 0.0 DECIMAL
- Each of the following are considered to be a FORTRAN variable. If any of them is valid indicate the mode, otherwise explain why it is not valid.
 - QUIZ1B DECIMAL
 - KARPET INTEGER
- Perform the following calculations using the FORTRAN rules of arithmetic:
 - $(13-5/8)/7 = 1$ $(13-0)/7 = 13/7 = 1$
 - Let: GAMMA=3.5, E=.1, RADIAN=2.
 $1.2*(RADIAN-5.*E*GAMMA)/(RADIAN-GAMMA) = -.2$
 $1.2*(2.-5*.1*3.5)/(2.-3.5) =$
 $= 1.2*(2.-1.75)/(-1.5) =$
 $= .3/(-1.5) = -.2$
- Indicate the errors, if any, in the following FORTRAN expressions:
 - $X22-(3.3*NEMO**2(K-1)+A)/B-B1$
 ↓
 1. MIXED MODES (NEMO IS INTEGER VAR)
 2. MISSING OPERATOR ($2(K-1)$)
 - $((K-3*KK/(IMIGE+5))-K**5)$
 ↑
 1. TOO MANY PARENTHESES
 2. INTEGER RAISED TO A DECIMAL POWER

K201 - Quiz 3B

For each employee in BEC company a card is punched with the following data:

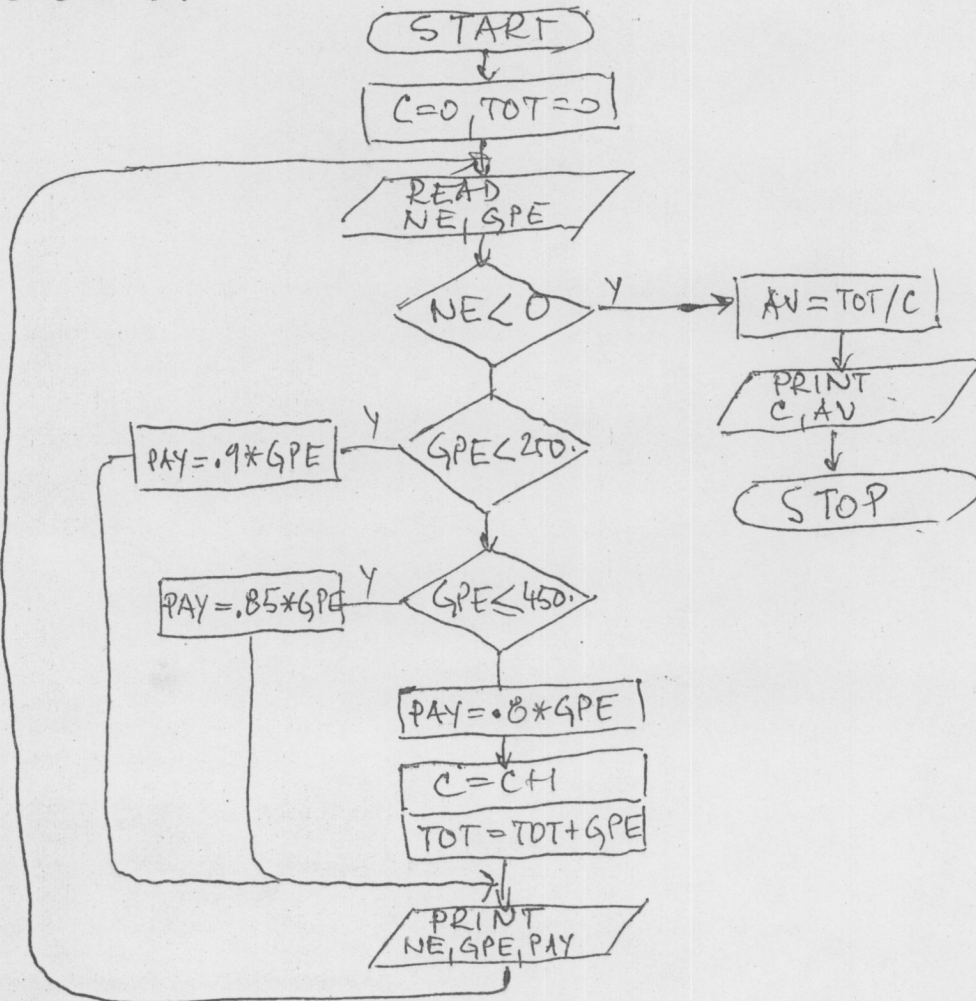

Card column	Description	Form	Variable Name
5-11	Employee #	Integer	NE
15-19	Weekly gross pay	XXX,XX	GPE

The last card has a negative number in columns 1-6. Each week these cards are processed by computer to calculate net pay and print a line with employee number, gross pay and net pay for each employee. Also, some summary results are printed on a separate page after all the employees' cards are processed.

$$\text{Net pay} = \text{gross pay} - \text{income tax}$$

where: income tax is 10% of gross pay if gross pay is less than \$250
 is 15% of gross pay if gross pay is between \$250 and \$450 inclusive
 is 20% of gross pay if gross pay is over \$450

Prepare a flowchart for a program to calculate net pay, print a line for each employee, and print the number of employees with gross pay over \$450 and their average gross pay.

K201 - Quiz 3A

KEY

For each employee in ABR company a card is punched with the following data:

Card Column	Description	Form	Variable Name
1-6	Employee #	Integer	NUM
10-14	Weekly gross pay	XXX XX ^	WGP

The last card has a negative number in columns 1-6. Each week these cards are processed by computer to calculate net pay and print a line with employee number, gross pay and net pay for each employee. Also, some summary results are printed on a separate page after all the employees' cards are processed.

$$\text{Net pay} = \text{gross pay} - \text{income tax}$$

where: income tax is 10% of gross pay if gross pay is less than \$300

is 20% of gross pay if gross pay is between \$300 and \$500 inclusive

is 30% of gross pay if gross pay is over \$500

Prepare a flowchart for a program to calculate net pay, print a line for each employee, and print the number of employees with gross pay less than \$300 and their average net pay.

K201-Quiz(D)

G. Resinovic

Name _____
 Sec. _____

For each street traffic accident in Aba county a report is prepared and data from the report are punched into a card according to the following card layout:

Card Column	Description	Variable Name
1-5	File number	
35-36	Year } Date	
37-38	Month } of	
39-40	Day } Accident	
42	Place of Accident (1-in town, 2-outside town)	
43	Cause of accident (1-Illegal Passing, 2-Negligence, 3-Alcohol)	
44	Type of Vehicle (1-bicycle, 2-motor, 3-car, 4-truck, 5-bus)	
46-52	Damage (in \$) xxxxxx,xx	
53-54	Number of Injured	
55-78	Name of Driver	

The data card deck is available for the last and the current year accidents. The last card in this deck has a negative number punched in data field "file number."

Prepare a flowchart for a program to list the name of car drivers involved in accidents caused by alcohol where one or more persons were injured and print the total number of persons injured in that conditions.

K201-Quiz 3(A)

G. Resinovic

Name _____
 Sec. _____

For each street traffic accident in Aba county a report is prepared and data from the report are punched into a card according to the following card layout:

Card Column	Description	Variable Name
1-5	File number	
35-36	Year } Date	
37-38	Month } of	
39-40	Day } Accident	
42	Place of Accident (1-in town, 2-outside town)	
43	Cause of accident (1-Illegal Passing, 2-Negligence 3-Alcohol)	
44	Type of Vehicle (1-bicycle, 2-motor, 3-car, 4-truck, 5-bus)	
46-52	Damage (in \$) xxxxxx^xx	
53-54	Number of Injured	
55-78	Name of Driver	

The data card deck is available for the last and the current year accidents. The last card in this deck has a negative number punched in data field "file number."

Prepare a flowchart for a program to find out what was the average damage of outside town accidents caused by alcohol in the year 1980 and print this value.

K201-Quiz 3(B)

G. Resinovic

Name _____
 Sec. _____

For each street traffic accident in Aba county a report is prepared and data from the report are punched into a card according to the following card layout:

Card Column	Description	Variable Name
1-5	File number	
35-36	Year	Date of Accident
37-38	Month	
39-40	Day	
42	Place of accident (1-in town, 2-outside town)	
43	Cause of accident (1-Illegal Passing, 2-Negligence, 3-Alcohol)	
44	Type of Vehicle (1-bicycle, 2-motor, 3-car, 4-truck, 5-bus)	
46-52	Damage (in \$)	xxxxxx^xx
53-54	Number of injured	
55-78	Name of driver	

The data card deck is available for the last and the current year accidents. The last card in this deck has a negative number punched in data field "File number."

Prepare a flowchart for a program to find out what was the average damage of in-town truck accidents caused by Illegal Passing and print this value.

K201 - Quiz 3B

For each employee in BEC company a card is punched with the following data:

<u>Card column</u>	<u>Description</u>	<u>Form</u>	<u>Variable Name</u>
5-11	Employee #	Integer	NE
15-19	Weekly gross pay	XXX [^] XX	GPE

The last card has a negative number in columns 1-6. Each week these cards are processed by computer to calculate net pay and print a line with employee number, gross pay and net pay for each employee. Also, some summary results are printed on a separate page after all the employees' cards are processed.

$$\text{Net pay} = \text{gross pay} - \text{income tax}$$

where: income tax is 10% of gross pay if gross pay is less than \$250
 is 15% of gross pay if gross pay is between \$250 and \$450 inclusive
 is 20% of gross pay if gross pay is over \$450

Prepare a flowchart for a program to calculate net pay, print a line for each employee, and print the number of employees with gross pay over \$450 and their average gross pay.
