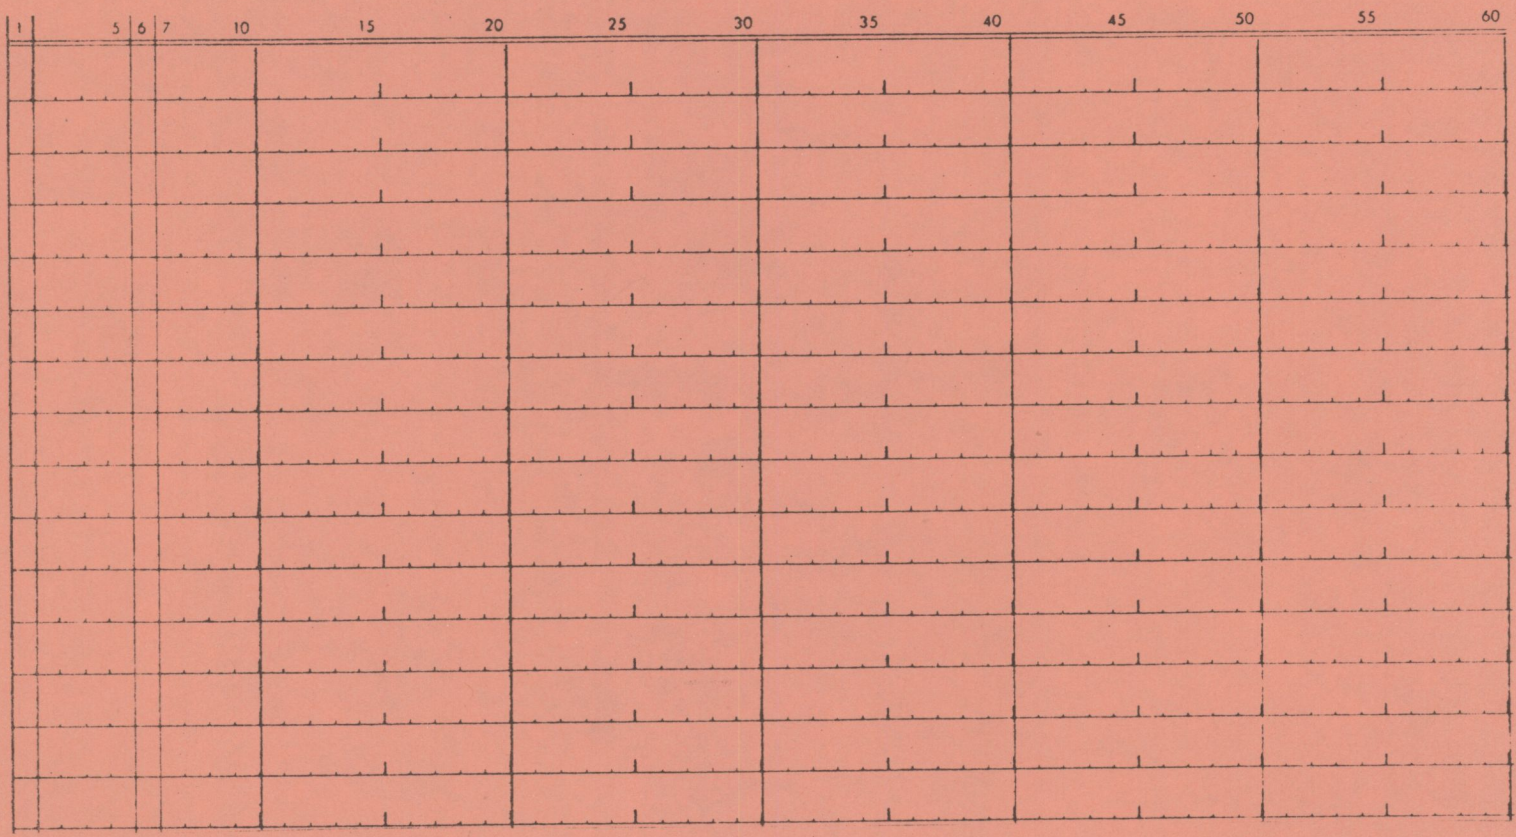
K201 - Quiz 6

1. Consider a deck of cards with the following card layout:

Columns	Variable	Form
1-6	KØDE	
10-14	MAP	
31-36	ART11	X^XXXXX
41-44	ART21	XX^XX
50	INT	

Cards are sorted according to control variable MAP. The end-of-data card has a negative number in the field KØDE.


Prepare a complete FORTRAN program to read these cards and copy them on magnetic tape with no space between the fields on the tape. Be sure to terminate this program properly.
