

# LOADING A PROGRAM

The procedure for loading a program is described in chapter 20 of the Spectrum manual. The steps are summarised below.

1. Connect the ear socket on your Spectrum to the ear socket on your cassette recorder.
2. Position the tape before the beginning of the program that you wish to load.
3. Turn the volume control to 3/4 of maximum or to a level which you have found to be reliable on your recorder.
4. Type LOAD "PROGRAM NAME" and press the ENTER key. The program name is printed on the cassette.
5. Start the cassette recorder playing.
6. Press any key.

Psion cassettes for the Sinclair ZX Spectrum are designed to load over a very wide range of volume and tone settings on your tape recorder. If you have any difficulty, ensure that the head and pinch-roller of your tape recorder are quite clean. Cleaning kits for this purpose are widely available.
