

ACKNOWLEDGEMENTS

I would like to acknowledge the contributions of the many people who have provided valuable assistance and suggestions for improvements to the book. Alfred Milgrom of Melbourne House was very helpful from the start. My many friends at Cambridge, especially Mark Plumbley and Julian Bane were always prepared to discuss technical problems and provide suggestions for improvements. My brother Nigel and John Kimmitt at Churchill College proof read the book. The continuous support of both my parents was invaluable. Finally, I will be grateful to receive any further suggestions from Spectrum users for improvements to the book.

CONTENTS

| | | |
|-------------------|---|------|
| Chapter 1 | Introduction | p7 |
| Chapter 2 | General overview of the complete Spectrum | p9 |
| Chapter 3 | The power supply — how the Spectrum supplies work — current limits — adding your own. | p15 |
| Chapter 4 | The Z80A central processing unit — what it does — pin descriptions | p23 |
| Chapter 5 | Video and program memory | p27 |
| Chapter 6 | The Basic read only memory | p31 |
| Chapter 7 | The Keyboard | p33 |
| Chapter 8 | The Uncommitted logic array — what it does — pin descriptions — the 'Dead Cockroach' — avoiding video memory conflicts — interrupts — clocks — keyboard and cassette input — cassette, buzzer and border colour outputs | p37 |
| Chapter 9 | The memory expansion sockets | p47 |
| Chapter 10 | The video circuit | p53 |
| Chapter 11 | Tuning your video circuit for better quality displays — changing the colour or grey scale | p55 |
| Chapter 12 | The Edge connector — contact by contact description | p59 |
| Chapter 13 | Fault diagnosis — no display? — No colour? | p62 |
| Chapter 14 | Experimenting with the edge connector — construction hints — using the accessible signals — RESET, INT, IOROGG, NMI, HALT — 128 I/O ports | p64 |
| Chapter 15 | Adding a Z80A PIO chip — a practical example | p73 |
| Chapter 16 | Adding your own keyboard — a construction project | p79 |
| Chapter 17 | Adding Sinclair compatible joysticks — construction project — APOLLO game program | p83 |
| Chapter 18 | Constructing an 8 channel analogue to digital converter — use as a joystick input — drawing program | p89 |
| Appendices | | |
| A | Glossary | p97 |
| B | References | p99 |
| C | Parts list cross reference | p100 |
| D | Component layout diagram | p102 |
| E | Complete circuit diagram | p104 |
| INDEX | | |
| | | p107 |
