* MAIL utility (requires the optional DECnet-VAX on each node for remote mail to another VAX/VMS system)
* Error logging and print utility
* Help facility
* DCL command interpreter
* DCL command definition utility
* Monitor utility (for displaying system activity)
* Various interactive and batch editors
* Text formatter (DIGITAL standard runoff)
* Log-in facility
* Network command terminal facility (allows remote log-in to another VAX-11 system if the optional DECnet-VAX software license and kit is installed on each node)
* Phone facility — An interactive communications utility with networking capability (requires the optional DECnet-VAX software license and kit on each node for remote communication)
* VAX MACRO assembler with cross-reference capability
* Linker with cross-reference capability
* Install utility
* Librarian utility with cross-reference capability
* Common run-time procedure library
* Symbolic debugger (for MACRO and most optional native-mode languages)
* VAX Record Management Services
* RMS file analysis and validation utility
* RMS file conversion and loading utility
* RMS Indexed Sequential file space reclamation utility
* RMS file design and tuning utility
* Files-11 ancillary control process
* Disk quota utility
* Back-up and restore facilities
* Disk structure analysis
* Magnetic tape ancillary control process
* Sort/merge utility
* File management facilities
* File differences utility
* File search utility (for searching the content of files)
* Dump utility
* Patch utility
* System dump analyzer
* Bad block locator utility
* Software maintenance update procedure
